

Demo Data toggle — manual test checklist

Preference: **Settings** → **Workspace** → **Use Demo Data** (stored in `localStorage` as `hakiscribe.workspace-settings.workspace.useDemoData`).

The login **Use demo credentials** CTA is intentionally **not** controlled by this toggle.

Persistence

- ☐ Default is **ON** for a fresh browser profile.
- ☐ Flip to **OFF**, reload the app — toggle stays OFF; no flash of seeded demo rows before real state applies.
- ☐ Flip back to **ON**, reload — toggle stays ON; demo shortcuts return.

When OFF

- ☐ Home: no “Open a completed judge demo” / multilingual demo buttons.
- ☐ Home: no auto “Restoring the desk” seed sync.
- ☐ Home: empty library shows “No sessions yet” without a “Load judge demo” button.
- ☐ Home / Settings recent / Case tracker: known seeded demo titles (Wanjiru, Otieno court seeds, Sahara seeds, etc.) do not appear.
- ☐ Stats (sessions / matters / ready) count only non-demo items.
- ☐ Refresh icon refetches live data; it does not call `/demo/sync`.

When ON

- ☐ Auto library sync can restore seeds.
- ☐ Judge demo and multilingual demo shortcuts are available.
- ☐ Empty state can offer “Load judge demo”.

Real data path (OFF)

- ☐ Start a mic (or Omi) session, finalize, and confirm it appears in the library and tracker.
- ☐ Empty library with zero real sessions is a clean empty state (not a broken layout).
- ☐ Toggle OFF → ON → OFF again: real sessions remain visible whenever OFF; demos only when ON.
