

HakiScribe technical documentation — Sahara

CodeSwitch Africa

Product and architecture

HakiScribe is a mobile-first legal-work agent for lawyers, judges, and clerks. It captures a browser-microphone or Omi conversation, produces a transcript, lets the professional identify speakers and redact privileged segments, then proposes selectable legal-work artifacts in an Action Tray. Every output is reviewed and editable by a human.

Sahara integration

- Configure Sahara through **Settings** → **Connectors** → **Intron Sahara (Voice AI)** or server-side `INTRON_API_KEY`.
- Live captions use OpenRouter Whisper for responsive feedback.
- On Stop, English–Kiswahili, supported African code-switch, or multilingual sessions can undergo Sahara legal/court-hearing refinement before speaker naming, redaction, and action detection.
- If the connector/key is unavailable, the app keeps the existing transcript and does not claim Sahara processing.

Source locations

Concern	Location
Frontend	<code>src/</code>
Backend API and session pipeline	<code>hakiscribe-backend/app/</code>
Transcription and Sahara refinement	<code>hakiscribe-backend/app/services/transcription.py</code>
Connector handling	<code>hakiscribe-backend/app/services/integrations.py</code>
Benchmark harness	<code>hakiscribe-backend/benchmarking/</code>
Architecture and API contract	<code>SPEC.md</code>
OAuth / connector setup	<code>docs/CONNECTOR_OAUTH_SETUP.md</code>

Run locally

```
cd hakiscribe-backend
pip install -r requirements.txt
uvicorn app.main:app --reload --port 8000

# from repository root
npm install
npm run dev
```

Put secrets in `.env.local` or deployment secret storage, never version control. `OPENROUTER_API_KEY` supports the default ASR/agent flow, `INTRON_API_KEY` enables Sahara, and a third-provider key is needed for benchmark comparison. See `.env.example` and `hakiscribe-backend/.env.example`.

Trust and safety

Users can redact transcript segments before language-model detection or generation. Generated work remains source-grounded, selectable, and editable; it is never automatically sent as legal advice. See `submission/RESPONSIBLE_AI.md` for known limitations and data handling.
